

RAHUL RAJEEV

Software Developer

Kochi, India | +91-6282981465 | r4hullrajeev@gmail.com www.linkedin.com/in/rahullrajeev
<https://github.com/rahullrajeev/>

Professional Summary

Results-driven and innovative Software Developer with a B.Tech in Computer Science Engineering, specializing in AI-powered web application development. Skilled in modern frontend technologies, AI-assisted development workflows, responsive UI design, and web application customization. Experienced in building intelligent, user-focused digital products with a strong emphasis on performance, scalability, and seamless user experiences. Passionate about leveraging AI and modern technologies to create impactful software solutions

Technical Skills

- **Programming Languages:** TypeScript, JavaScript, Python
- **Frontend:** React, Next.js, Tailwind CSS, HTML, CSS
- **Backend:** FastAPI, Node.js
- **AI/ML:** Google Gemini AI, Generative AI, Prompt Engineering, Embeddings, RAG (Retrieval-Augmented Generation)
- **Tools & Platforms:** Git, GitHub, Docker, Monaco Editor, Sandpack, Vercel, LangChain, LangGraph, Cursor
- **Concepts:** Generative API Development, UI/UX Design, Responsive Design, Component-Based Architecture, State Management, System Design, Microservices

Education

B.Tech in Computer Science Engineering: SNGIST Group of Institutions, Ernakulam

Projects

ModuSpark AI Component Studio

AI-powered component generator built with Next.js, React, TypeScript, Tailwind CSS, and Google Gemini AI.

<https://moduspark-ai-component-studio.vercel.app/>

- Developed an AI-driven platform that generates modern React and Tailwind CSS UI components from natural language prompts.
- Integrated Google Gemini AI for advanced generative capabilities, transforming text descriptions into functional code.
- Implemented a live code preview feature using Sandpack, enabling real-time visualization of generated components.
- Incorporated Monaco Editor for an editable code sandbox, allowing users to modify and refine generated code directly within the application.
- Designed and built a responsive, modern user interface with a focus on SaaS-style aesthetics and dark-mode compatibility.
- Engineered a robust API ([/api/generate](#)) to handle AI requests and manage component generation logic.

AI Codebase Intelligence Engine (Ongoing Project)

An AI-powered system designed to deeply understand and interact with entire codebases using advanced AI engineering concepts.

- Currently developing a comprehensive AI system for semantic retrieval, repository indexing, and context engineering within codebases.
- Focusing on building an AI that behaves like a senior developer who fully understands the entire repository, going beyond mere code generation.
- Utilizing AI Engineering concepts such as embeddings, vector databases (Qdrant), semantic search, RAG (Retrieval-Augmented Generation), chunking strategies, context orchestration, and prompt engineering.
- Implementing backend engineering with async pipelines, file ingestion, and parsing systems. The recommended tech stack includes Python, FastAPI, Gemini API, PostgreSQL, and Redis.
- The system aims to allow developers to upload repositories, ask questions about architecture, generate repo-aware components, understand dependencies, trace code flow, detect issues, and generate documentation.
